

H1N1--School District Cleaning:

Friday, October 30th was an Institute Day (no student attendance) for the entire District. During that day and the evening of the 30th, the entire day and evening cleaning crew performed an intensive cleaning of all furniture, chairs, tables, benches, door knobs, surfaces that are routinely touched by students and staff, etc. with an EPA approved 3M Neutral Quat Disinfectant Cleaner. This product is used routinely in the cleaning process in the School District, and has been used since July 1, 2009. Furthermore, this product will kill influenza Type A H1N1 bacteria and other bacteria. For questions or comments on the cleaning process please email rick.marzec@lz95.org Facilities Director.
